

Hydrostatic Data Assimilative Model (ROMS-ESPRESSO)

Julia Levin
John Wilkin
Javier Zavala-Garai

Outline

- ESPreSSO model. Improvements in data assimilation
 - Climatological DA to improve seasonal mean and MDT
 - Better bias reduction of HYCOM boundary conditions
 - Good representation of meso-scale activity
- IODA v1 results (1-way nested in Espresso DA model)
 - Internal tide
- Plans for Doppio domain (include Gulf of Maine)
 - DA assimilation to drive IODA via 1-way nesting
 - 2-way nesting without DA, from 7 km down to 800 m resolution

Global models have biases, which propagate to the regional model.

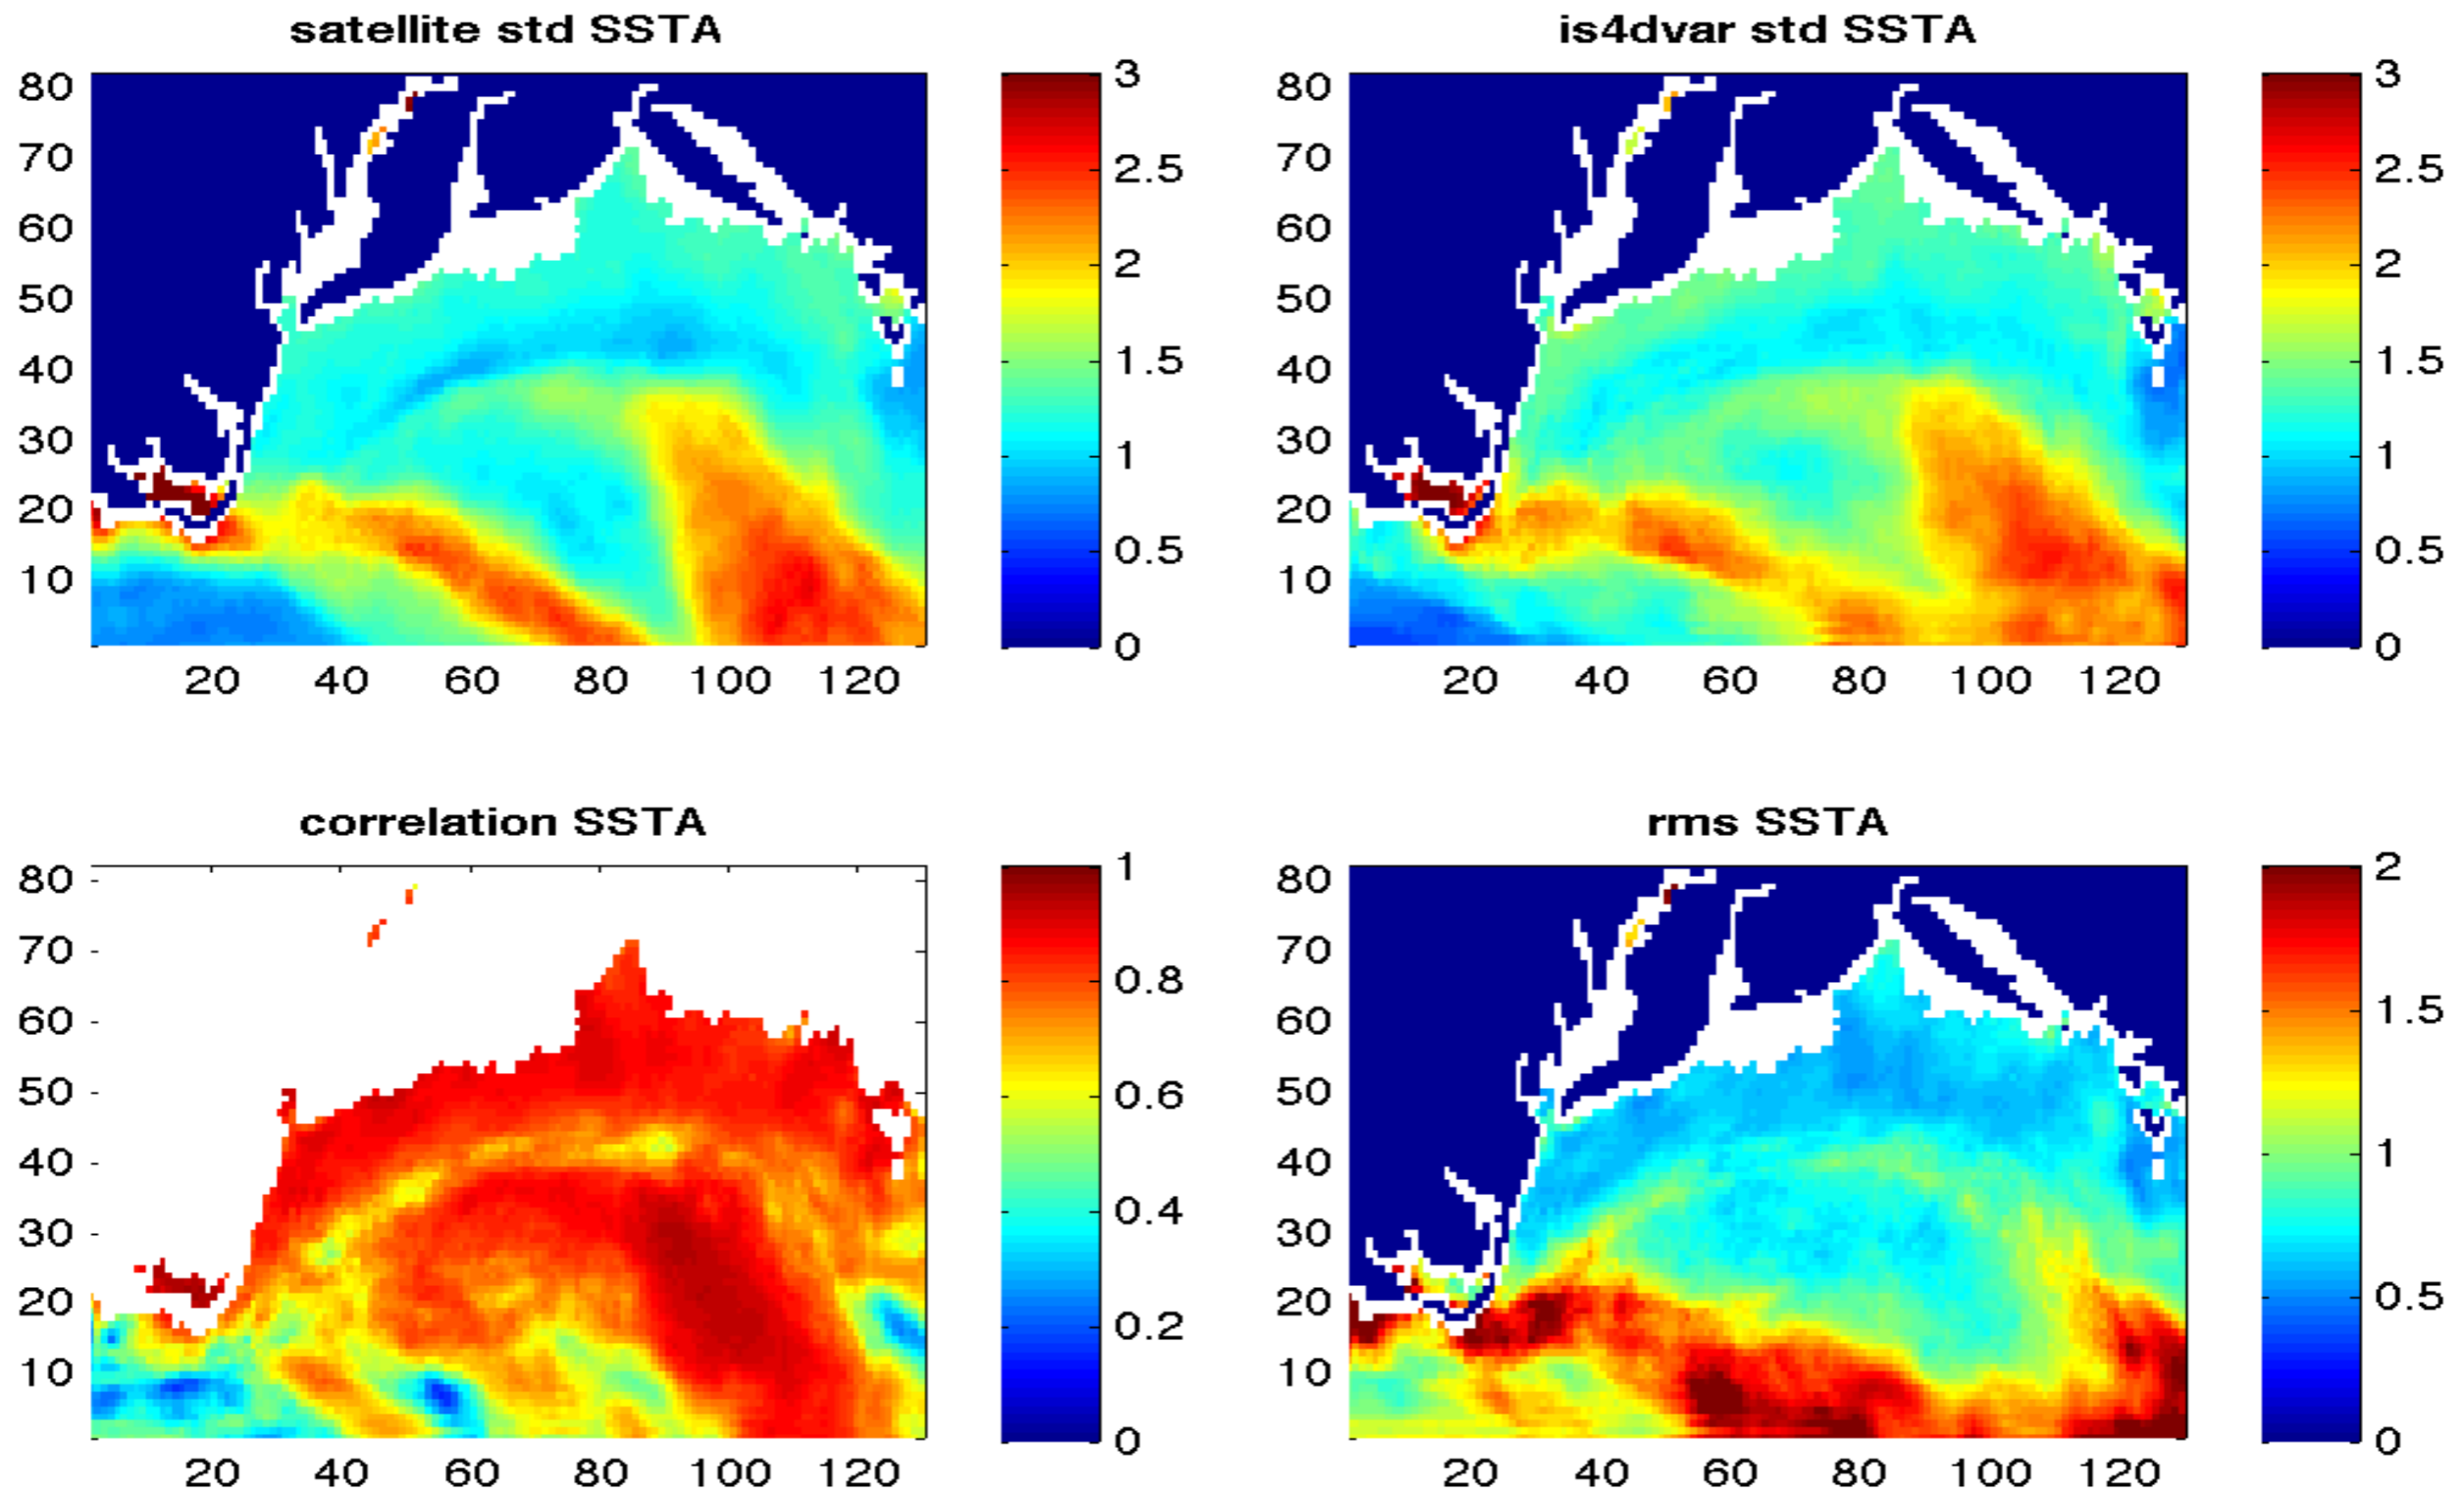

Before using data assimilation one should reduce as much as possible such biases in the regional model

Replaced the seasonal climatology of temperature and salinity from HYCOM by that derived from climatological assimilation described above before using it to force ROMS.

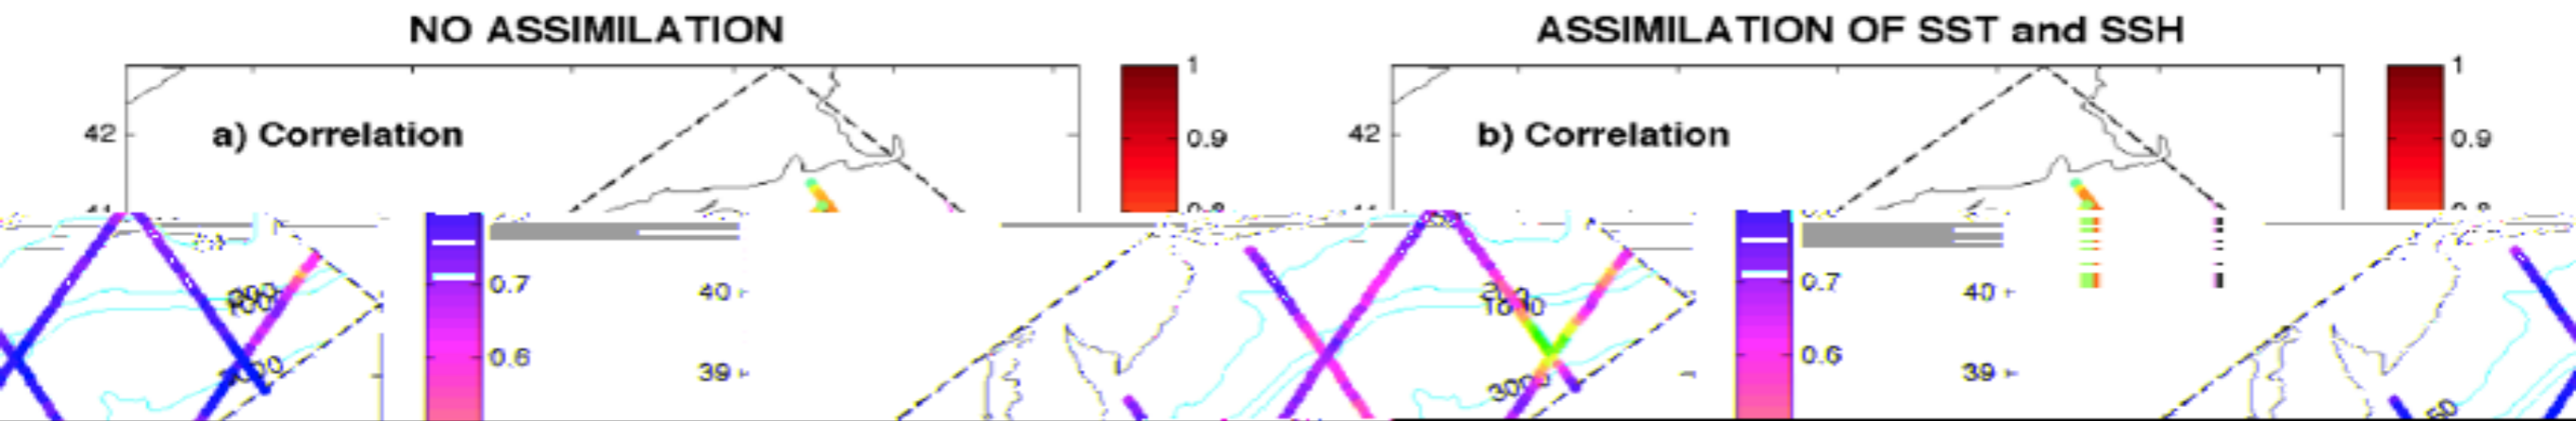

Background error covariance scaled by an standard deviation file.

Strong seasonality in the MAB shelf background field -> Strong seasonality in the standard deviations.

Skill in hindcasting mesoscale SST by the assimilation system

Correlation and RMS error between Jason along-track data and model SSHA before and after data assimilation

Correlation and RMS error between **NOT ASSIMILATED** ENVISAT along-track data and model SSHA and vertical skill in temperature

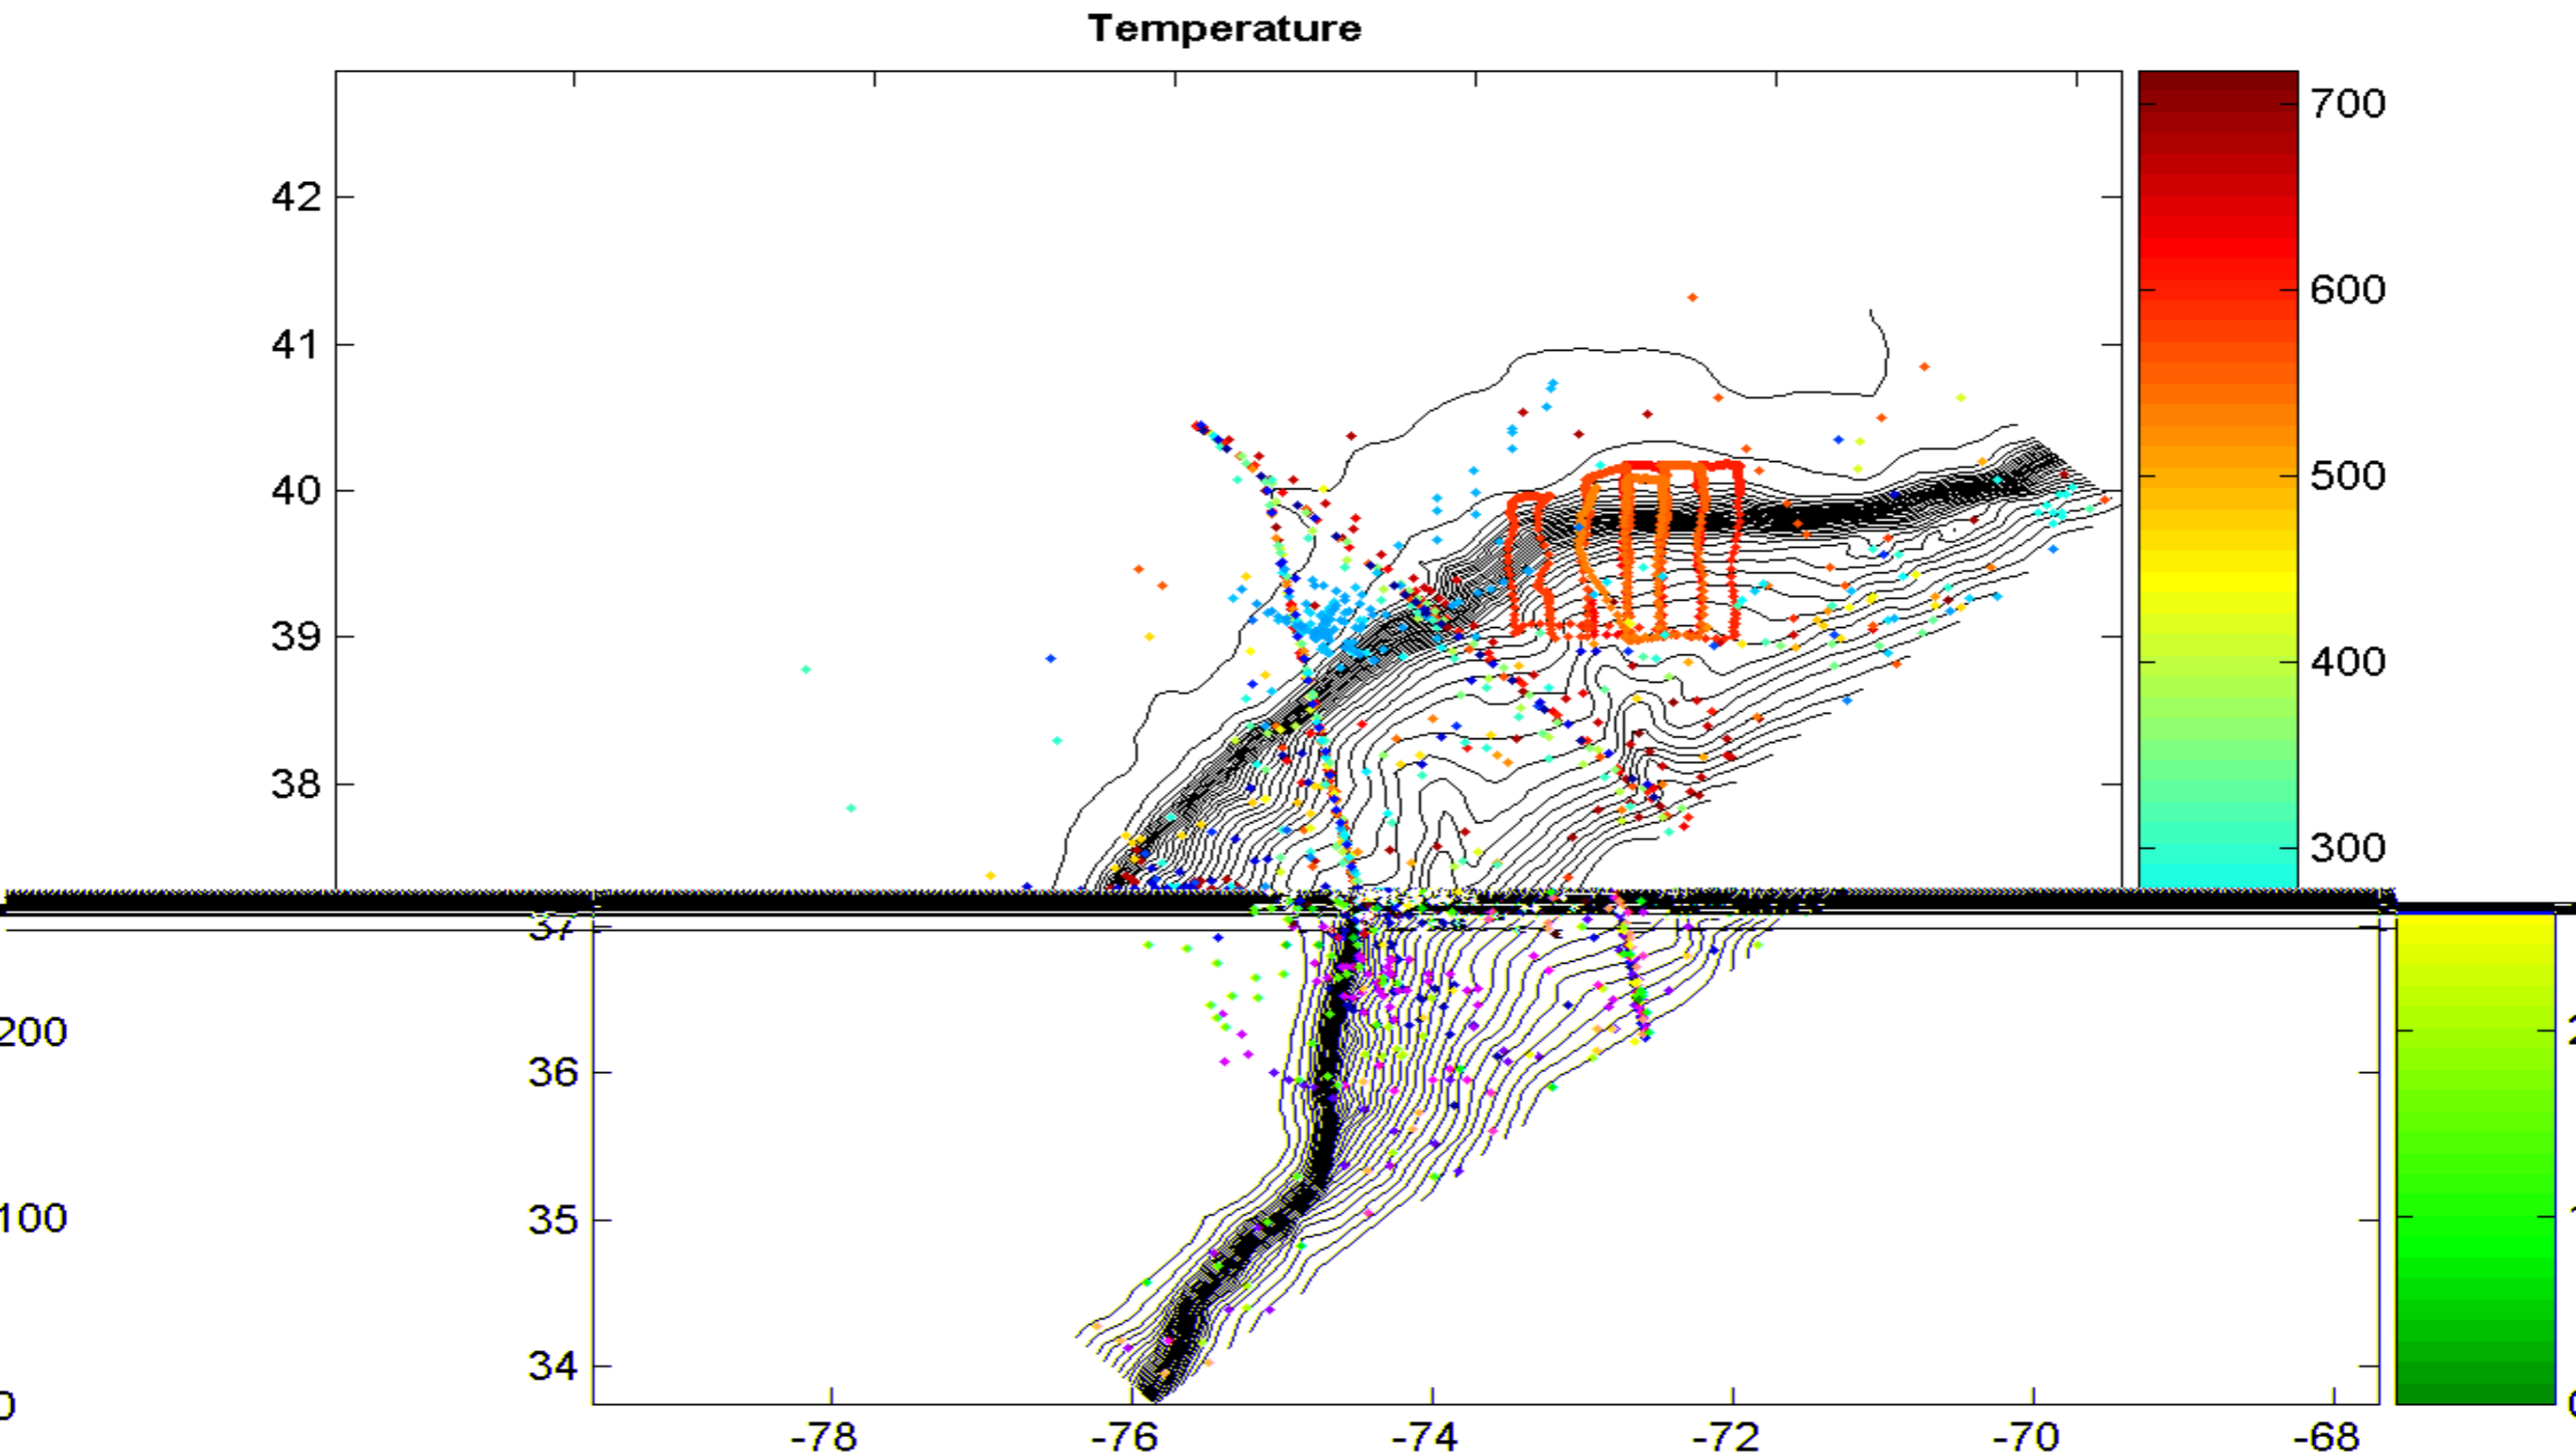

a) Correlation with non-assimilated ENVISAT SSH

c) RMS with non-assimilated ENVISAT SSH

Large set of T and S observations from CTD, gliders, XBTs for 2006 (SW06) and 2007

Skill in hindcasting/forecasting **NOT ASSIMILATED** subsurface temperature

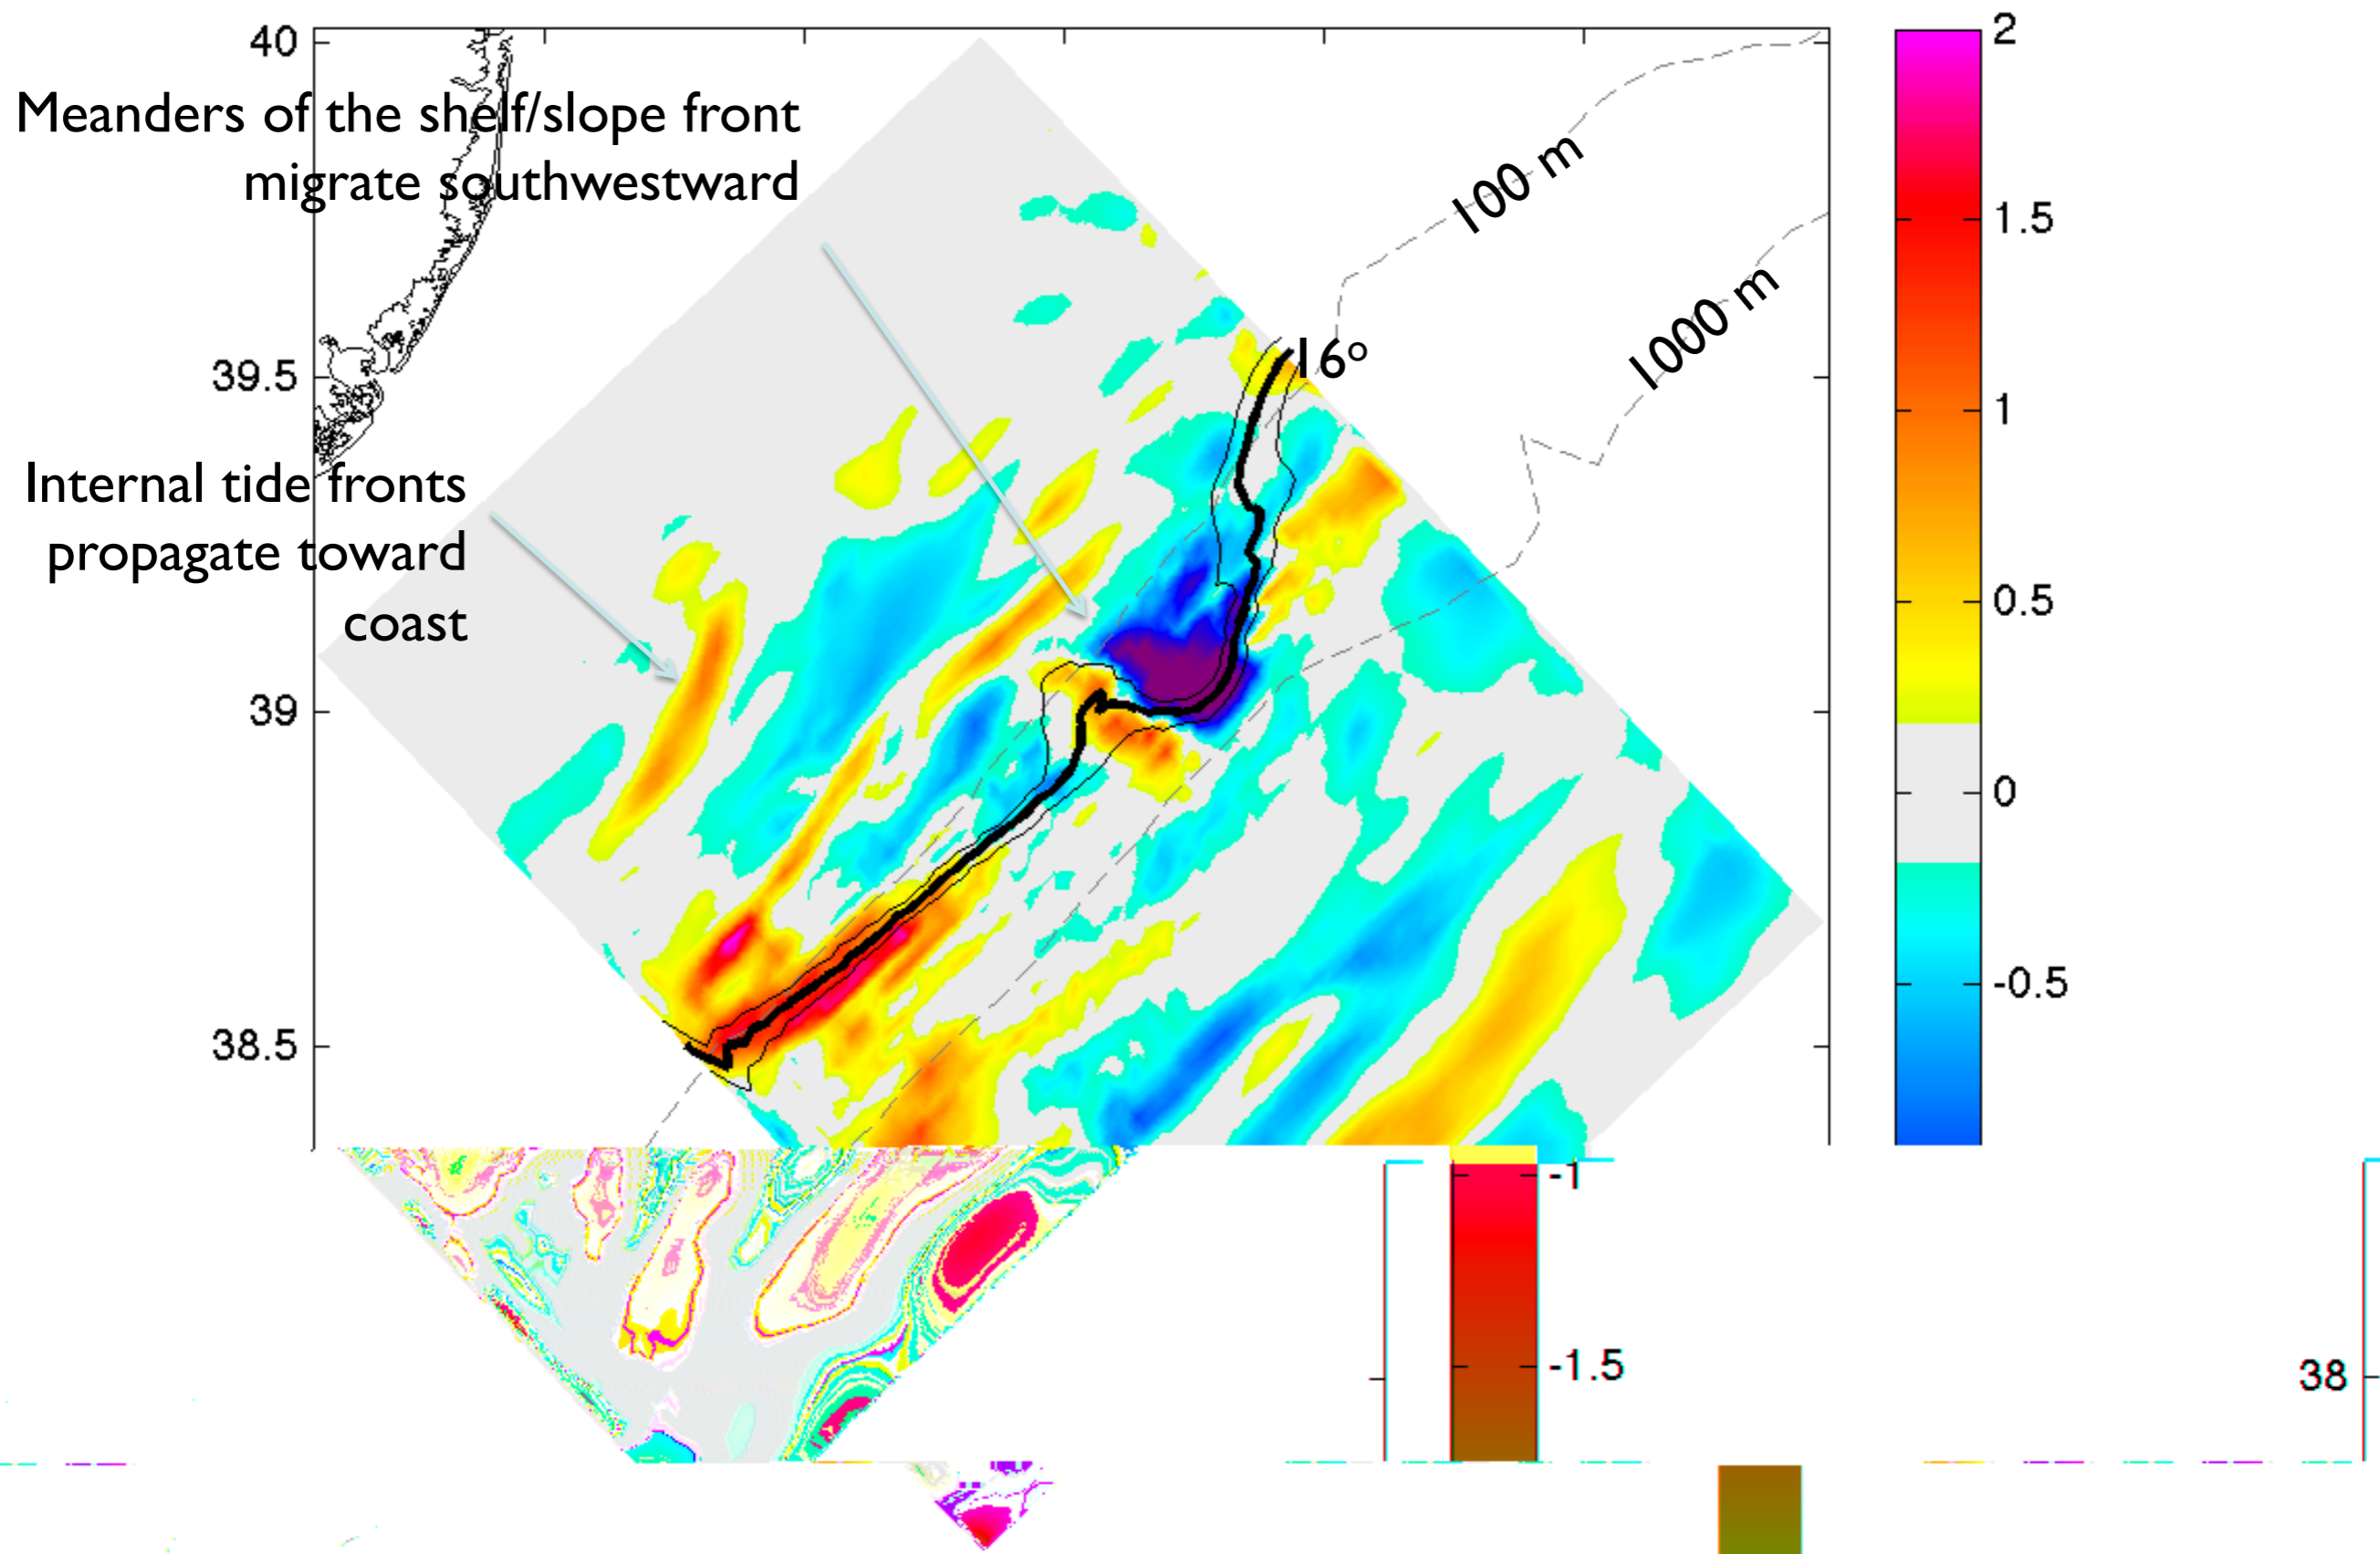

Skill in hindcasting/forecasting **NOT ASSIMILATED** subsurface temperature

Skill in hindcasting/forecasting **NOT ASSIMILATED** subsurface temperature

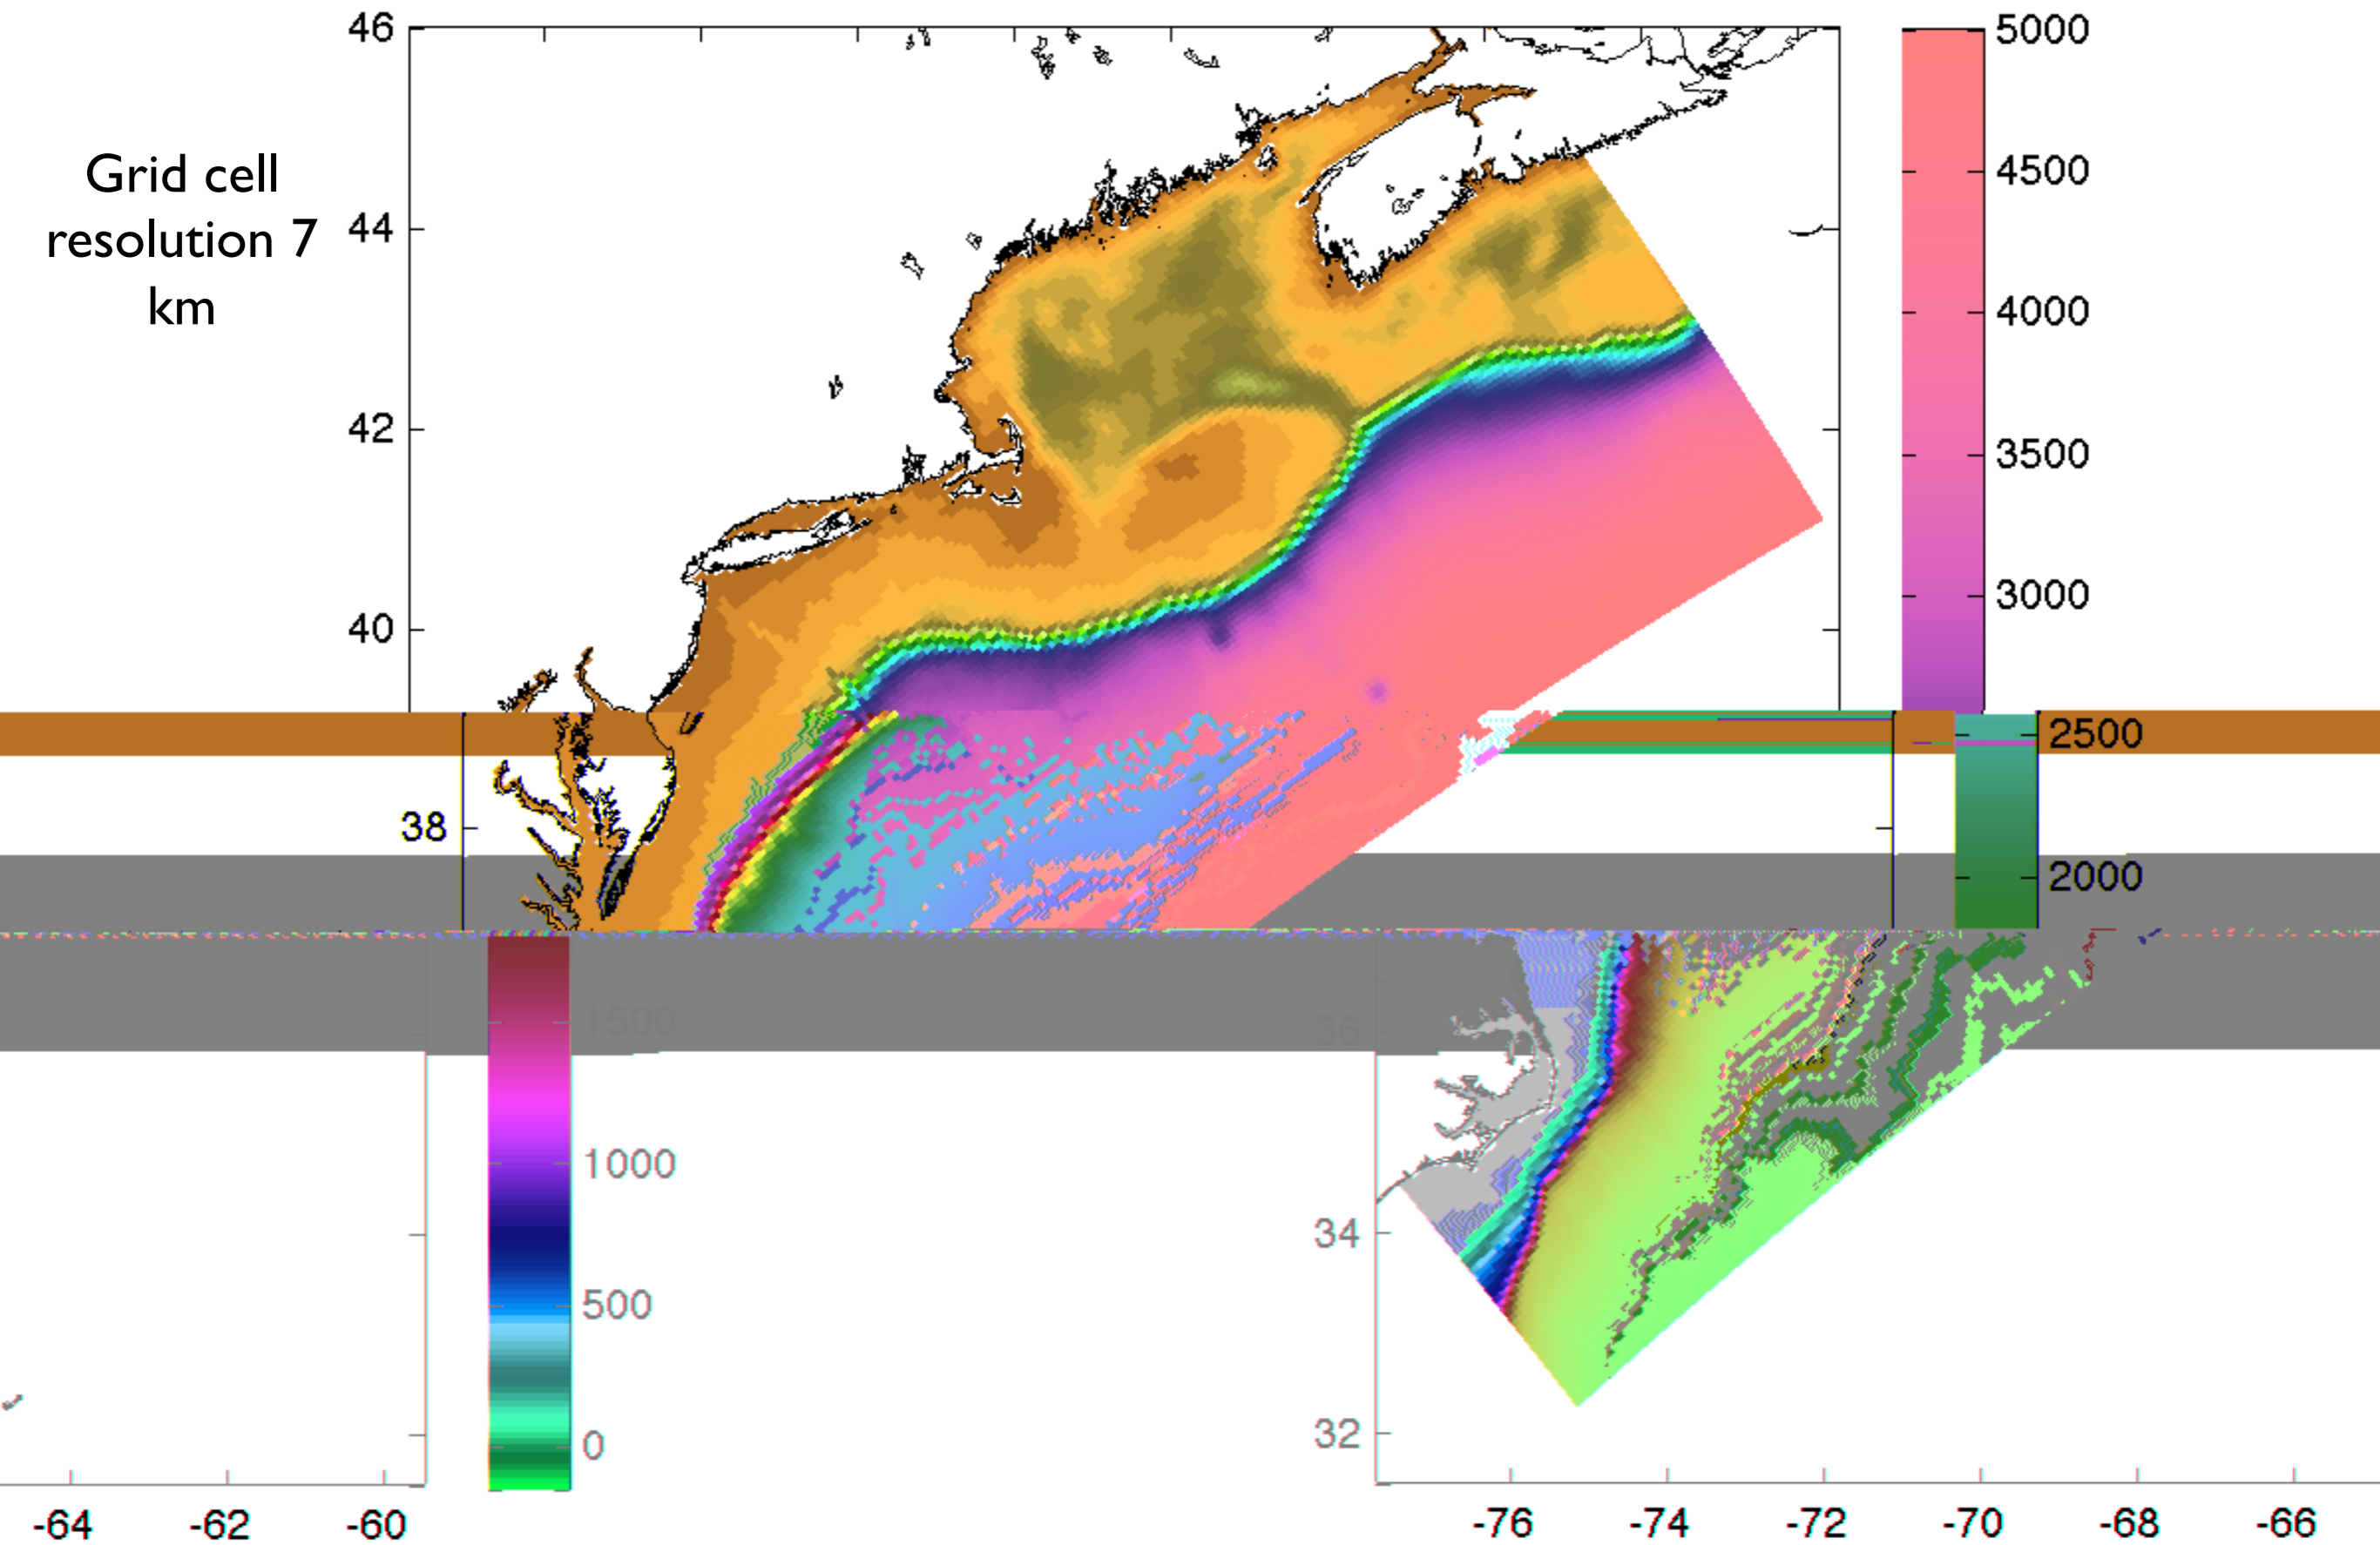

IODA v1 I-way nested in ESPreSSO: Temperature at 20 m

Colors show high-pass anomaly with respect to a 36-hr cutoff running-mean filter temperature. Solid contours are 14, 16, 18° isotherms

Proposed *Doppio* domain extracted from E. Curchitser Northwest Atlantic (NWA) model

Grid cell
resolution 7
km

Proposed *IODA* domain (version 2) (only every 3rd grid cell) to nest within *Doppio*

Proposed SW06 domain (only every 3rd grid cell) to nest within IODA

Proposed SW06 domain (only every 3rd grid cell) to nest within IODA
